

## SmartMail 7 key features

The purpose of this document is to highlight some key features of the award-winning SmartMail 7. For more information please contact Smartphone Solutions Support.

- synchronization of emails, calendar, contacts and tasks
- encrypted and packed data connection optimized for mobile network – multiple times more efficient compared to competitors
- supports numerous different devices with multiple platforms including Symbian 60v3/v5, Android, J2ME and Windows Mobile (for an up-to-date list please visit [http://www.smartphonesolutions.fi/en/smartmail\\_devices.html](http://www.smartphonesolutions.fi/en/smartmail_devices.html))
- scheduled synchronization times to save battery and improve user convenience
- roaming setting to prevent unnecessary data costs
- easy setup when taken in use
- optimized email viewer and editor in Symbian 60 – clear black/white contrast, one-click message details, auto-filling of email addresses
- administrator can fully configure settings and force them to clients
- Global Address List lookup – one point for easy access to all user's and company's contacts
- subfolder synchronization support
- sophisticated filtering of synchronized emails

### Additional features include:

- intranet access – fully configurable by administrators, secure and packed data connection through Connector (requires user authentication)
- automatic backup process for disaster recovery purposes
- email data encryption in Symbian 60 mobiles
- possibility to use several devices per user
- over-the-air upgrading of SmartMail clients
- Policy-based user management (v7.4)
- Domino: ID-based user authentication and synchronization of encrypted emails (v7.4)
- HTML email support

### Upcoming features (Q1/2011):

- Mobile Device Management – includes basic MDM functionality for the most commonly used features
- device security settings enforcement
- full wipe of device memory and memory card
- access point configuration
- control list of allowed applications and prevention of installation of new applications
- detailed device inventory
- remote application installation
- roaming control
